

## Senior Systems Disaster Recovery Plan for Self-Hosted Schools

In an uncertain world, it's important to plan ahead....

A myriad of threats exist to your school's data, including natural disasters, such as floods, and storms, as well as simple power outages caused by routine construction. The Senior Systems Disaster Recovery plan protects your school's data from a disaster that renders data processing inoperable or unusable. Data recovery is achieved by capturing backups of your school's data at scheduled intervals. If for any reason Disaster Recovery is initiated, the most recent backup will be the starting point for instating your environment.

### How It Works

With the Senior Systems Disaster Recovery service, you have 24/7 peace of mind in the event of a disaster. If your local environment is rendered inaccessible, simply notify Senior Systems of the disaster, and Senior Systems will immediately take action to connect your school with the 24-hour-a-day, 7-day-a-week Recovery Center. The conversion from using your current environment to using the Disaster Recovery environment will be a seamless one for your end users.

### Scheduled Testing Phase

Once a Disaster Recovery plan has been established at your school, a yearly-scheduled testing phase will be setup at your convenience. During this testing phase, the Disaster Recovery plans and procedures are enacted to ensure that the Disaster Recovery plan is working as intended. This yearly testing phase is a critical step to ensure a smooth transition to the Recovery Center in the event of a disaster.

### Implementation

If you are interested in setting up a Disaster Recovery plan, contact your Senior Systems Sales representative to discuss your options. Your Sales representative will provide you with our standard questionnaire, which you can use to choose from various export options and/or list your specific requirements.
