

# Senior Academic Office Release Bulletin

## Inside

Query System Enhancement  
p.2

It is our pleasure to introduce you to the new **Enhancement** features in YOUR **ACADEMIC OFFICE APPLICATIONS**.

### All Applications

If your school uses the Crystal Reports product to create your own reports, you can now 'launch' those reports directly out of *Senior Systems* and from the appropriate application. For example if you have a REGISTRAR specific Crystal Report it can be set up to 'launch' from the REGISTRAR Reports menu. You can also now create Crystal Reports that use the *Senior Systems* query system. This option will automatically link the correct tables for your report making the initial report set-up much easier to do. Please refer to the **Crystal Reports Integration Supplement** for information on how to activate this

### Query System Enhancement

The Allow Change at Runtime option in the query system has been moved to the Standard tab on the condition entry screen in the query systems of ADMISSIONS, ENROLLMENT MANAGEMENT, FINANCIAL AID, and SUMMER SCHOOL. This change has also been done in the query systems in the Export facilities in REGISTRAR, DEAN'S OFFICE, SCHEDULING and PLACEMENT.

# Query System Enhancement

The Allow Change at Runtime option in the query system has been moved to the Standard tab on the condition entry screen. This change will make it easier to select this function without having to go to the *Advanced* tab each time you would like to use this function in your query.
